 Office Writer also supports the range 
 of formatting capabilities available in 
 competing products. Superscripts, 
 subscripts, double underline, boldface, 
 and compressed or expanded text are all 
 available. Macros and user-defined 
 printer drivers can produce these 
 effects. The program contains text 
 features and supports multiple fonts 
 in the same document.

 Beyond the features for editing and 
 printing text, Office Writer now offers 
 indexes, which can be placed at the 
 bottom of the page or at the end of 
 the document. Headers and footers can 
 have six lines or 512 characters and include 
 a page number. Single, double, or triple 
 columns can be printed, and the program 
 includes a print management feature that 
 permits several documents to be stored on 
 disk for controlled printing while the main 
 Office Writer program continues to allow 
 editing of stored documents.

 In addition, a complex series of com- 
 mands permits document assembly 
 in which fragments of two or more 
 different documents are assembled into a final text. 

 Other auxiliary features include a document 
 conversion system that takes Office 
 Writer documents and translates them into a 
 form useful for the Wang word processor. 
 It also provides facilities from 
 Multimate to Office Writer, 
 Office Writer to ASCII (standard 
 characters without any 
 special word processing codes), 
 and ASCII to Office Writer. 
 The program now supports 
 Reusable Forms, Document 
 Architecture, and IBM document 
 format standard.

 The purchase of a data base system 
 should be the beginning of a relationship. 
 That relationship should include 
 planned product upgrades, 
 experienced technical support, training, 
 information seminars, and marketing 
 programs. It will also depend on 
 the relationship with the 
 manufacturer.
