Now you can find a needle in the haystack in three seconds flat.

With MemoryMate™

Imagine tossing all your notes and files into a huge desk drawer. Then magically discovering that every time you want something, it's right there on top.

We call it MemoryMate. A new breed of data manager that reduces your paper clutter and takes the mess off your desk.

Unlike structured data bases, MemoryMate is freedom and works intuitively. Once you enter a record (up to 67 lines each) every single word, phrase, and date is automatically indexed. And cross-indexed.

This means that MemoryMate can find that record later by using any word, date, or phrase in it. And MemoryMate does it fast. You can search 300K on a PC XT in three seconds.

And since MemoryMate is memory-resident, it's always there. You can access it while other programs are running. You can even cut and paste between MemoryMate and other programs and vice versa.

Just enter your menus, notes, tables — anything — using the built in word processor. You can forget designing "keyboards" just like you can forget where you stored that important scrap of paper or yellow Post-it.

You can even forget all your to-do lists and deadlines. Because MemoryMate reminds you. Hidden messages pop-up on screen automatically on the days you select.

So how complex is all this to operate? MemoryMate has only 15 simple commands and they're always on screen. So you can access all that power easily — without having to remember a thing.

Find what you need using a single word.

Or a sentence.

Let's say you want to call an attorney you met playing tennis last May. But you can't remember his name. All you remember is that you put a note about him in MemoryMate.

So you type in the word "tennis" and hit the search key. In seconds, all records containing "tennis" begin to appear. And that's called your manager. To pursue your search, you type "tennis" as a key and attorney. Maybe he got his name and phone number.

With all this praise and all these incredible features, you'd expect MemoryMate to cost a lot more than $69.95. But it doesn't.

And, right now you can get a demo disk for less than six bucks — which can be rebated when you buy MemoryMate. 

So fill in the coupon below and send it in. And be sure to do it now, before you forget.

After all, you don't have MemoryMate to remind you. Yet.

Is a better memory worth $69.95?

Much more, according to Michael J. Miller, Infoworld: "If you've got lots of unstructured information to keep track of, MemoryMate is a wonder... And at $69.95, it's a bargain."

PC Week agrees: "Once you've unloaded MemoryMate's power, you'll wonder how you ever got by without it."

Syndicated columnist Bob Schwartz is ecstatic: "I don't know quite how they did it...but this thing is lightning fast."
