Academic Performance & Athletic Retention within NCAA Division III Does Institutional Selectivity Matter?

John Emerson, Principal Investigator Rachelle Brooks, Project Director Claudia Youakim, Associate Director Elaine Croft McKenzie, Researcher Klara Mueggenburg, Researcher

Supported by The Andrew W. Mellon Foundation

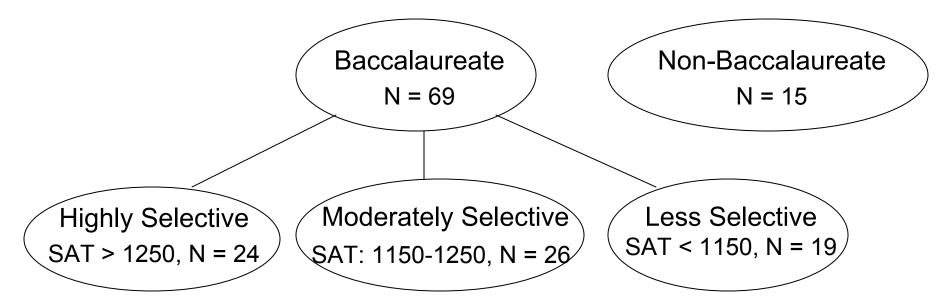

Introduction to the College Sports Project

- The College Sports Project (CSP) is committed to strengthening the alignment between intercollegiate athletics and educational values.
 - Representativeness initiative: athletes representative of student body
 - Integration initiative: bringing together campus personnel around education and athletics
 - Project started in 2005, currently in fourth year of data collection
 - Five-year longitudinal study of > 80 Division III institutions out of a total of 447 Division III institutions
 - Quantitative data submitted annually by institutions

Institutions and Cohorts

• Data from 84 institutions

- Selectivity levels are based on average SAT score of incoming class
- Year 1 and Year 2 information on two cohorts:
 - Entering class of 2005-2006 (N = 41,356)
 - Entering class of 2006-2007 (N = 42,372)
- N = 83,728 students

Demographics of Combined Cohorts

- N = 83,728
- Gender: 43% male, 57% female
 - 84 institutions include 6 Women's Colleges and 2 Men's Colleges
- Race/Ethnicity: 6% Asian, 4% Black, 5% Hispanic, 71% White, 3% Other, 11% Unknown (includes international students)
- Citizenship: 95% US citizen or permanent resident
- Athletic participation categories
 - Non-Athlete: never played sport, not recruited for a sport
 - Recruited Athlete: was recruited for a sport (may or may not have played)
 - Walk-on Athlete: not recruited but played a sport

| Athletic Participation | Percentage of Students |
|-----------------------------|------------------------|
| Male Non-Athlete | 27% |
| Male Recruited Athlete | 11% |
| Male Walk-On Athlete | 5% |
| Female Non- Athlete | 45% |
| Female Recruited Athlete | 8% |
| Female Walk-On Athlete | 5% |

Examining Group Differences

- Comparison Measures
 - Institutional Selectivity
 - Race/Ethnicity
 - Type of Sport
- Outcome Measures
 - Cumulative college GPA at the end of Year 2
 - Are there differences in average GPAs between athletes and non-athletes?
 - Underperformance
 - What part of GPA differences between athletes and nonathletes cannot be predicted by the explanatory variables (e.g. demographics, high school performance, high school characteristics)?
 - Athletic Retention
 - Did students who played sport in Year 1 return to play in Year 2? (Focus on recruited athletes.)

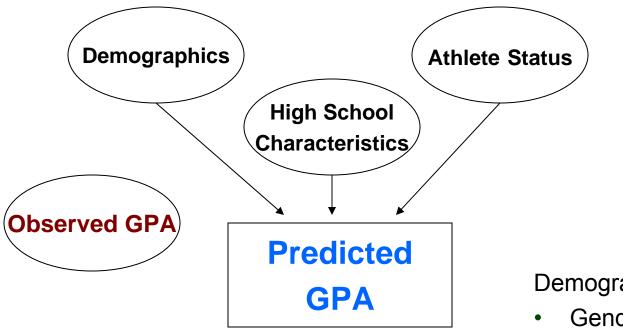

Main Findings

- Institutional selectivity highlights diversity of athletic / academic experiences within Division III.
- Being a recruited male or female athlete is related to underperformance at most, but not all Division III institutions in the CSP. The exceptions are often among the less selective institutions.
- At less selective institutions, there is smaller underperformance, but also lower year 2 retention in the sport for male recruited athletes. The opposite is true at highly selective institutions.

Understanding Underperformance

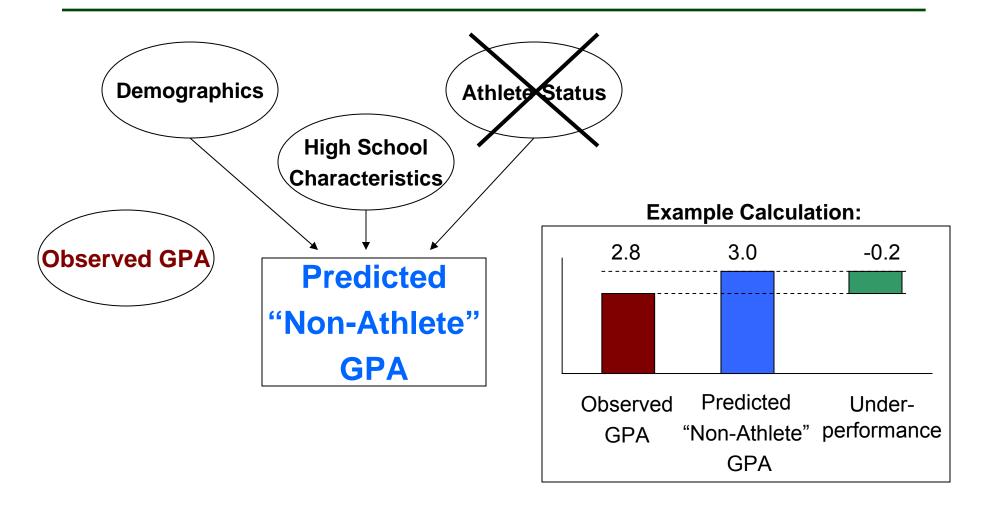

- **Demographics:**
- Gender
- race/ethnicity
- U.S. citizen •

High School Characteristics:

- Student's SAT score •
- High School GPA Rank •
- Average SAT of High School •

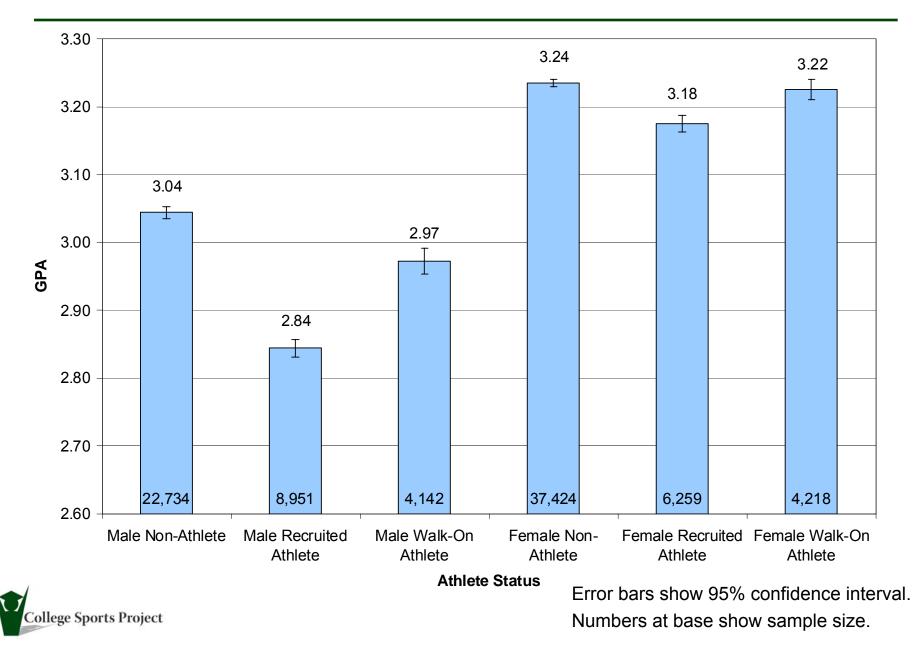

Understanding Underperformance

Observed GPA – "Non-Athlete GPA" = Underperformance

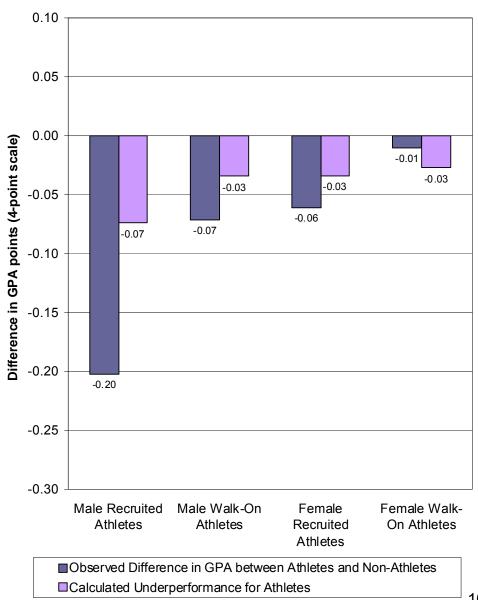

GPA by Athlete Status

GPA Difference and Underperformance

- Each group is compared to <u>non-</u> <u>athletes</u> of the same <u>gender</u>
- For <u>male recruited</u> athletes, about <u>two thirds</u> of the GPA difference can be <u>explained</u> by background variables, rest is labeled "underperformance"
- For <u>male walk-on</u> athletes and <u>female recruited athletes</u>, about <u>half</u> of the GPA difference can be explained by background variables
- Female walk-on athletes have <u>larger underperformance than</u> <u>GPA difference</u>
 - they are not performing as well as expected even though their GPAs are close to non-athletes

How do performance measures of athletes differ by institutional selectivity?

Sample Sizes Combined 2005-2006 and 2006-2007 Cohorts

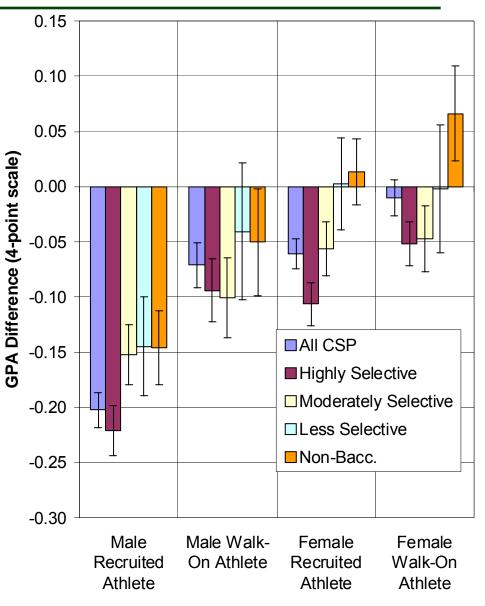

| Athlete Status | Highly Selective | Moderately Selective | Less Selective | Non-Bacc. | Total |
|--------------------------|------------------|----------------------|----------------|-----------|--------|
| Male Non-Athlete | 6,288 | 6,502 | 2,921 | 7,023 | 22,734 |
| Male Recruited Athlete | 2,355 | 2,822 | 2,127 | 1,647 | 8,951 |
| Male Walk-On Athlete | 1,452 | 1,492 | 617 | 581 | 4,142 |
| Female Non-Athlete | 12,250 | 10,006 | 4,970 | 10,198 | 37,424 |
| Female Recruited Athlete | 1,936 | 1,929 | 1,180 | 1,214 | 6,259 |
| Female Walk-On Athlete | 1,938 | 1,262 | 575 | 443 | 4,218 |
| Total | 26,219 | 24,013 | 12,390 | 21,106 | 83,728 |

Even smallest sample size is > 400

College GPA Difference by Selectivity

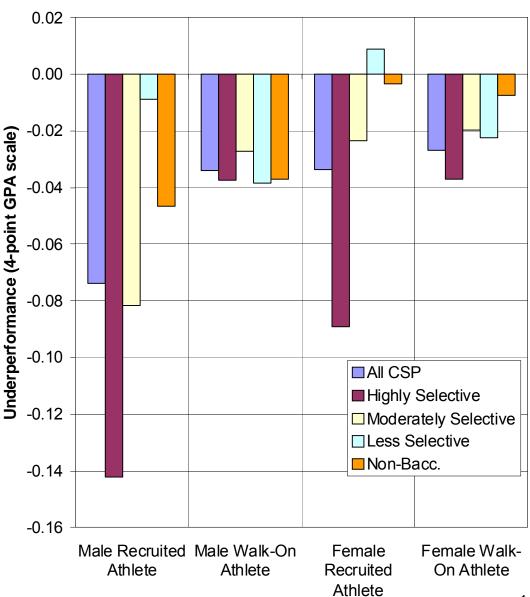

- Each group is compared to <u>non-athletes</u> of the same <u>gender</u>
- <u>Male recruited</u> athletes have <u>greatest negative difference</u> with male non-athletes
- <u>Female walk-on</u> athletes have GPAs closer to non-athletes
- Difference is <u>statistically</u> <u>significant</u> for all athlete groups for <u>highly selective and</u> <u>moderately selective</u> institutions
- All differences <u>may not</u> have <u>practical significance</u>

Underperformance by Selectivity

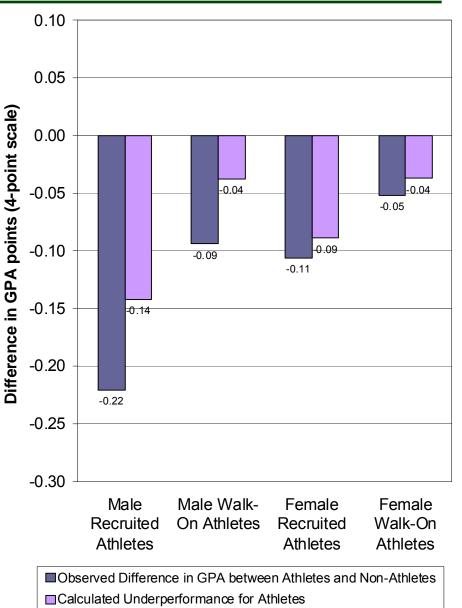

- <u>Male recruited</u> athletes have greatest underperformance
- Athletes at <u>highly selective</u> institutions have greatest underperformance
- Underperformance is <u>meaningful</u>/important (greater than 0.1) only for <u>male recruited</u> athletes at <u>highly selective</u> institutions
- Underperformance for <u>female</u> athletes (except recruited at highly selective) is <u>small</u>

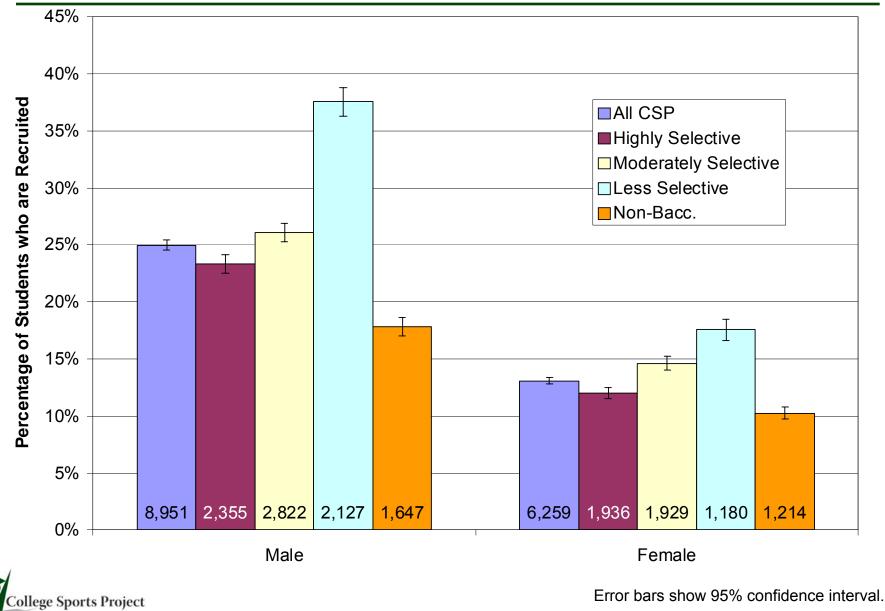

GPA Difference and Underperformance Highly Selective Institutions

- For <u>recruited athletes</u>, most of GPA difference is <u>underperformance</u>
 - GPA difference is not well explained by differences in incoming characteristics
- Most of GPA difference for <u>female</u> athletes is <u>underperformance</u>
 - There is little in the background characteristic differences between female athletes and non-athletes to explain the GPA difference

Athletic Recruitment

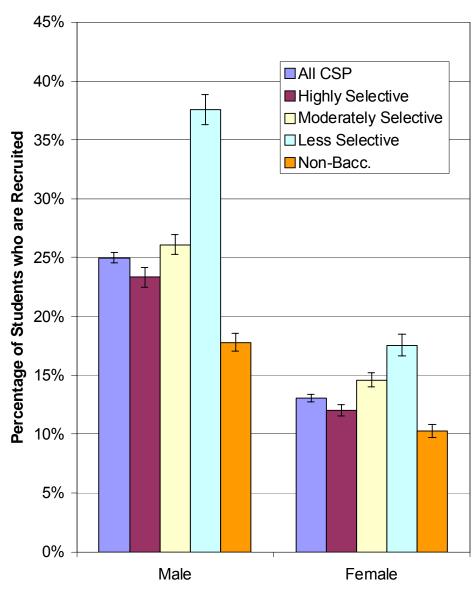

Numbers at base show sample size.

16

Athletic Recruitment

- A greater percentage of <u>male</u> <u>students</u> than female students are recruited for athletics
- <u>Less selective institutions</u> recruit a higher percentage of their students
 - At <u>less selective</u> institutions over a <u>third of the male</u> <u>students</u> are recruited athletes
- Differences in percentage of recruited students between institutional selectivity levels are <u>statistically significant</u>
- Recruited athletes include some students who never played in college

Athletic Retention

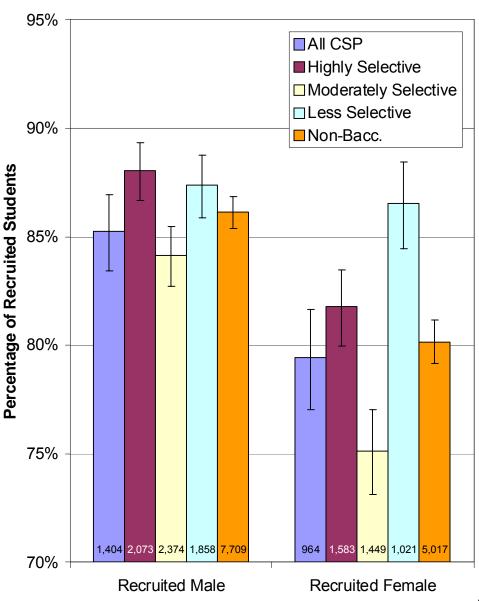

- Year 1 Retention: percentage of recruited students who played the sport for which they were recruited in Year 1
- Year 2 Retention: percentage of recruited Year 1 players who also played in Year 2 (sport for which they were recruited)

```
All Students
Recruited Athletes (18%)
Year 1 Retention (84%)
Year 2 Retention (78%)
```

Year 1 Retention in Recruited Sport

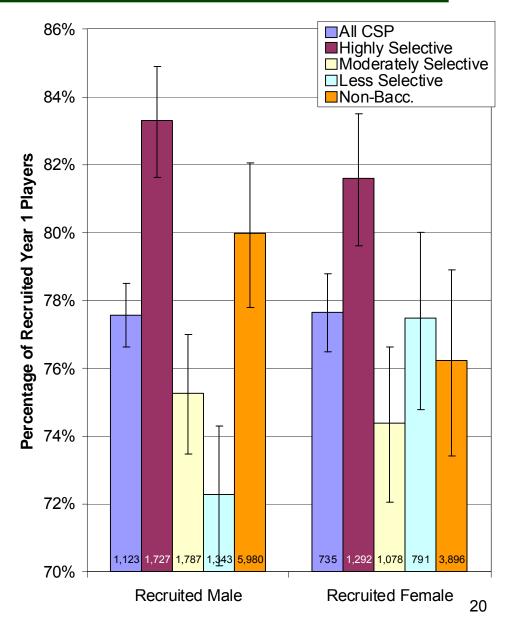

- Year 1 Retention: percentage of recruited students who played the sport for which they were recruited in Year 1
- <u>85% of male</u> recruited students play the sport for which they were recruited in year 1, compared to <u>79% of women</u>
- <u>Moderately selective</u> institutions have significantly <u>lower</u> year 1 athletic retention than other institutions

Year 2 Retention in Recruited Sport

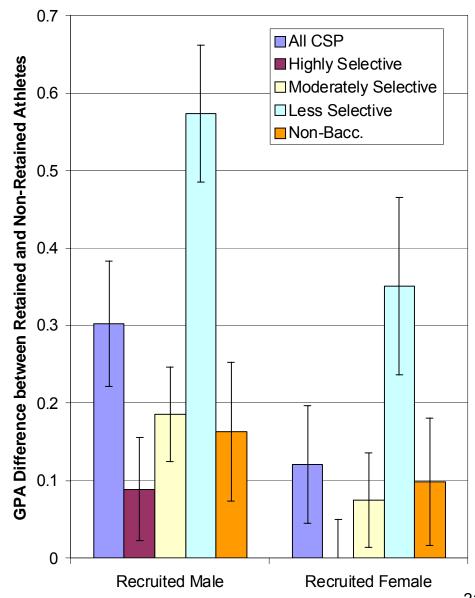

- Year 2 Retention: percentage of recruited Year 1 players who also played in Year 2 (sport for which they were recruited)
- <u>22%</u> of recruited men and women who played in year 1 do <u>not return</u> in year 2
- Year 2 athletic <u>retention</u> is significantly <u>higher</u> at <u>highly selective</u> institutions for both men and women
 - Academic support services?
- At less selective institutions, recruited women who played in year 1 are more likely than men to continue playing in year 2
- <u>30% of male</u> students and <u>21% of</u> <u>female</u> students not retained in sport <u>withdrew</u> from school by end of year 2
- <u>Lowest athletic retention</u> is among <u>men</u> in <u>less selective</u> institutions

Year 2 Retention: GPA Difference between Retained and Non-Retained Athletes by Selectivity

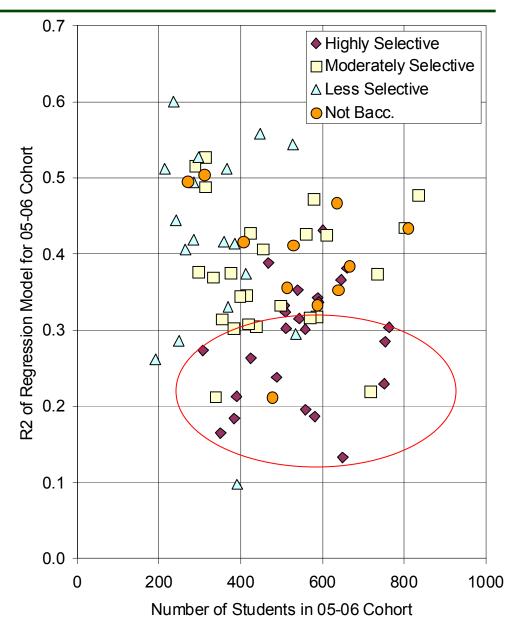

- <u>Academic performance</u> may be related to <u>decision to play</u> sport in year 2 primarily at <u>less</u> <u>selective</u> institutions
- GPA difference between retained and non-retained athletes is <u>statistically</u> <u>significant</u>
- <u>Highly selective</u> institutions have the <u>smallest</u> GPA difference
- GPA difference is <u>largest</u> at <u>less selective</u> institutions
- GPA difference is <u>smaller</u> for <u>female athletes</u> at all selectivity levels

Regression Model Predicting GPA is Robust

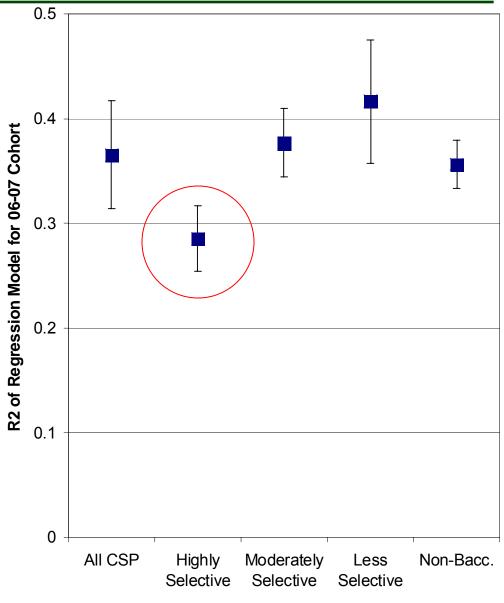

- 20% to 50% of variation in GPA can be explained by model
- Model operates similarly for
 - Different institutional sizes
 - Different cohorts
 - Different recruitment methods (admissions vs. coach)

R² by Selectivity

 Students at highly selective institutions my be relatively homogeneous with regard to SAT scores, high school ranks and college GPAs, making it difficult for regression models to predict differences the college grades

Research Findings

- Male athletes, especially male recruited athletes do less well academically than their non-athlete counterparts
- Much of this difference is not explained using background variables (high school performance, demographics)
- Recruited athletes at highly selective institutions have larger negative GPA differences and underperformance athletes at moderately and less selective institutions
- Less selective institutions recruit a larger fraction of their student bodies
- Higher percentage of recruited year 1 players continue playing in year 2 at highly selective institutions than at institutions of lower selectivity levels
- R² for the regression model is lower at highly selective institutions than at other institutional selectivity levels

- Institutional selectivity highlights diversity of athletic / academic experiences within Division III.
- Being a recruited male or female athlete is related to underperformance at most, but not all Division III institutions in the CSP. The exceptions are often among the less selective institutions.
- At less selective institutions, there is smaller underperformance, but also lower year 2 athletic retention in the sport for male recruited athletes.
- At highly selective institutions, there is greater underperformance, but higher year 2 athletic retention in the sport for male recruited athletes.

Academic Performance & Athletic Retention within NCAA Division III Does Race/Ethnicity Matter?

John Emerson, Principal Investigator Rachelle Brooks, Project Director Claudia Youakim, Associate Director Elaine Croft McKenzie, Researcher Klara Mueggenburg, Researcher

Supported by The Andrew W. Mellon Foundation

Diversity in Higher Education

- <u>Research</u> has been done about the r<u>elationships</u> between ethnicity, athletics, and academic performance in <u>Division I</u>
 - <u>Recruited minority athletes</u> have average high school <u>credentials</u> significantly <u>worse</u> than those of <u>non-recruited</u> students. (Schulman and Bowen, 2001)
 - Institutions have a <u>disproportionately high</u> number of <u>athletes</u> within <u>minority</u> student groups (Lederman, 2008).
 - <u>Graduation</u> rates among <u>minority athletes</u> are <u>higher</u> than among non-athletes of the same race (Matheson, 2007).
- Less is known about the <u>relationship</u> between ethnicity, athletics, and academic performance <u>within Division III</u>
 - Study of <u>three institutions</u> found that <u>athletic teams</u> tend to have <u>less racial diversity</u> than the student population as a whole (Fried, 2007).

Sample Sizes Combined 2005-2006 and 2006-2007 Cohorts

All CSP Institutions

| Gender, Athlete Status | Asian | Black | Hispanic | White | Other | Unknown | Total |
|---------------------------|-------|-------|----------|--------|-------|---------|--------|
| Male Non-Athletes | 1,538 | 793 | 1,109 | 15,889 | 699 | 2,706 | 22,734 |
| Male Recruited Athletes | 182 | 553 | 271 | 7,123 | 217 | 605 | 8,951 |
| Male Walk-On Athletes | 168 | 242 | 159 | 3,060 | 115 | 398 | 4,142 |
| Female Non-Athletes | 2,765 | 1,794 | 2,009 | 25,062 | 1,426 | 4,368 | 37,424 |
| Female Recruited Athletes | 192 | 181 | 161 | 5,146 | 157 | 422 | 6,259 |
| Female Walk-On Athletes | 235 | 167 | 176 | 3,134 | 112 | 394 | 4,218 |
| Total | 5,080 | 3,730 | 3,885 | 59,414 | 2,726 | 8,893 | 83,728 |

Highly Selective Institutions

| Gender, Athlete Status | Asian | Black | Hispanic | White | Other | Unknown | Total |
|---------------------------|-------|-------|----------|--------|-------|---------|--------|
| Male Non-Athletes | 521 | 252 | 375 | 4,288 | 107 | 745 | 6,288 |
| Male Recruited Athletes | 110 | 114 | 78 | 1,882 | 48 | 123 | 2,355 |
| Male Walk-On Athletes | 96 | 81 | 78 | 1,042 | 23 | 132 | 1,452 |
| Female Non-Athletes | 1,439 | 675 | 838 | 7,385 | 299 | 1,614 | 12,250 |
| Female Recruited Athletes | 106 | 52 | 41 | 1,582 | 40 | 115 | 1,936 |
| Female Walk-On Athletes | 164 | 92 | 105 | 1,338 | 52 | 187 | 1,938 |
| Total | 2,436 | 1,266 | 1,515 | 17,517 | 569 | 2,916 | 26,219 |

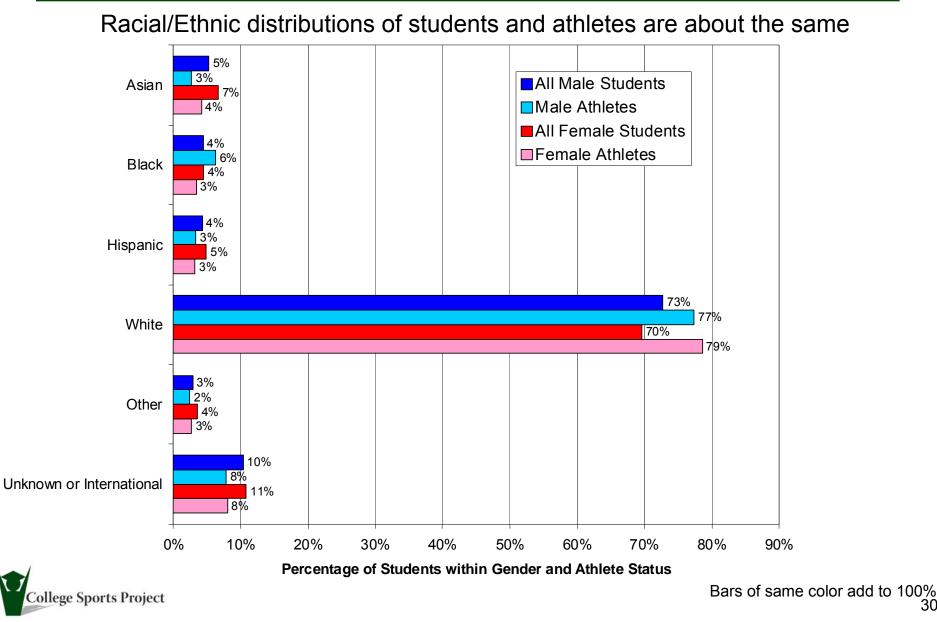

Unknown includes international students ²⁸

Main Findings

- Athletic participation and recruitment patterns vary by race and by institutional selectivity.
- Moderately and less selective institutions recruit a higher fraction of Black, Hispanic and White students than highly selective institutions.
- Hispanic athletes at highly selective institutions have GPAs comparable to their non-athlete counterparts, whereas Black and White athletes at these institutions have lower GPAs than their non-athlete counterparts.
- Highly selective institutions have the largest underperformance for Black and White male athletes, while less selective institutions have largest underperformance for Hispanic male athletes.

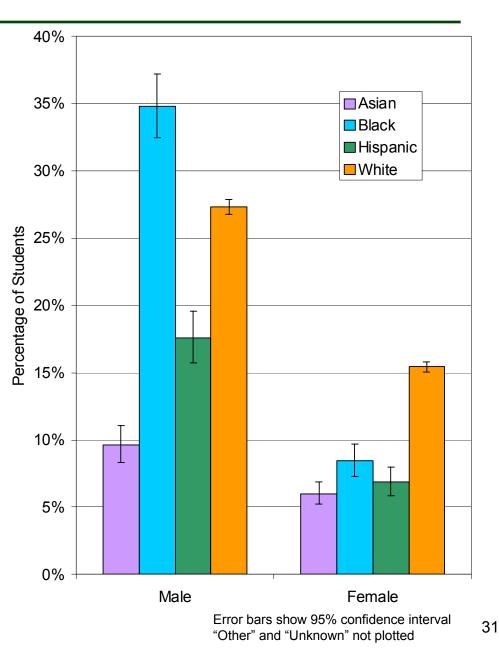

Racial-Ethnic Distribution in CSP Institutions

Percentage of Students who are Recruited

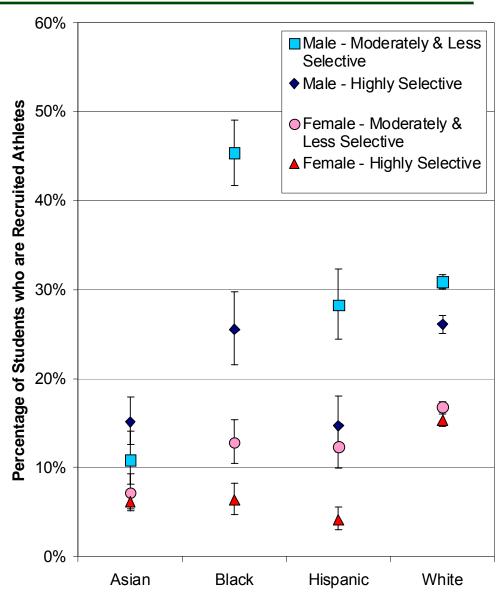

- A higher percentage of <u>men</u> than women are <u>recruited</u> athletes
- A significantly <u>higher percentage</u> of <u>Black and White men</u> are <u>recruited</u> athletes than the corresponding percentages among Asian and Hispanic men
- A significantly <u>higher percentage</u> of <u>White women</u> are <u>recruited</u> athletes than other women
- <u>Asian</u> students have the lowest percentage of recruited athletes
- Differences are <u>statistically</u> <u>significant</u> for <u>men</u>

Recruitment by Selectivity

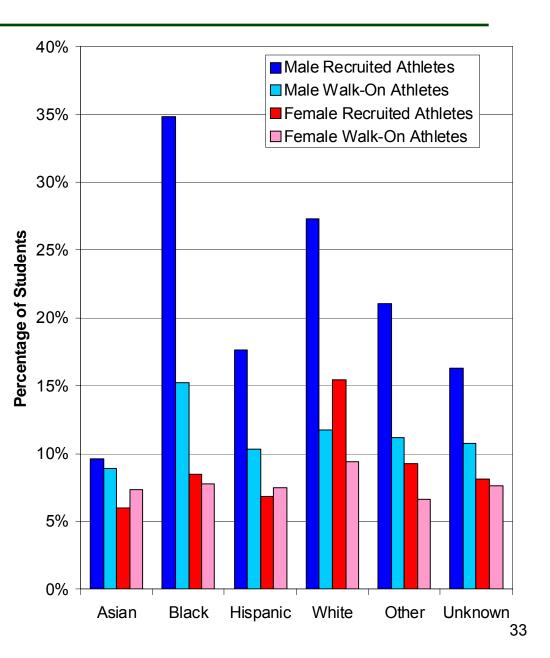

- <u>Highly selective</u> institutions <u>recruit</u> a <u>smaller percentage</u> of their Black, Hispanic and White students than moderately and less selective institutions
- A larger percentage of <u>Black male</u> students at <u>moderately and less</u> <u>selective</u> institutions are recruited than students of other races
- At <u>highly selective</u> institutions, <u>Black and White</u> male students are <u>equally</u> likely to be recruited
- <u>Women</u> are <u>less</u> likely to be recruited than men in all categories except Asian students

Percentage of Student Athletes

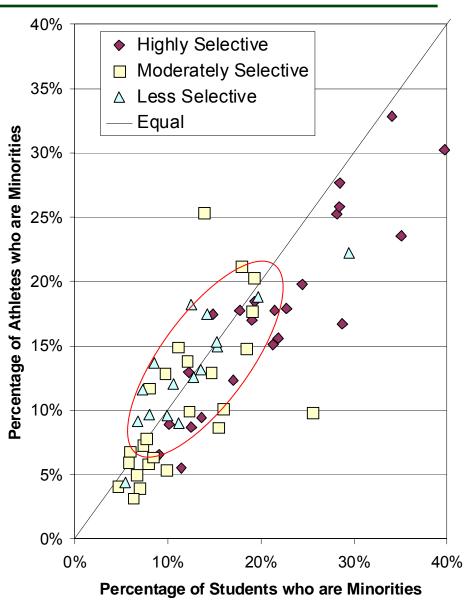

- <u>Male</u> students are more likely to be <u>athletes</u> than female students
- <u>Black male</u> students are most likely to be <u>recruited athletes</u>, followed by <u>White male</u> students
- <u>Asian</u> students are <u>least</u> likely to be athletes
- Overall, a <u>large percentage</u> of <u>men</u> are <u>athletes</u> in most racial groups (half of Black men, 39% of White men)

Institutional Selectivity and Athletic Participation

- "Minorities" indicates Asian, Black, Hispanic or Other.
- Typically, <u>highly selective</u> schools have <u>larger</u> fraction of both students and athletes who are <u>minorities</u>
- At <u>highly selective</u> schools, <u>athletes</u> are slightly <u>less diverse</u> than the student body (corroborating Fried, 2007)
- At <u>most institutions</u>, the diversity of <u>athletes reflects</u> the diversity of the institution when all minority students are aggregated
- Most institutions have 10-20% minority students

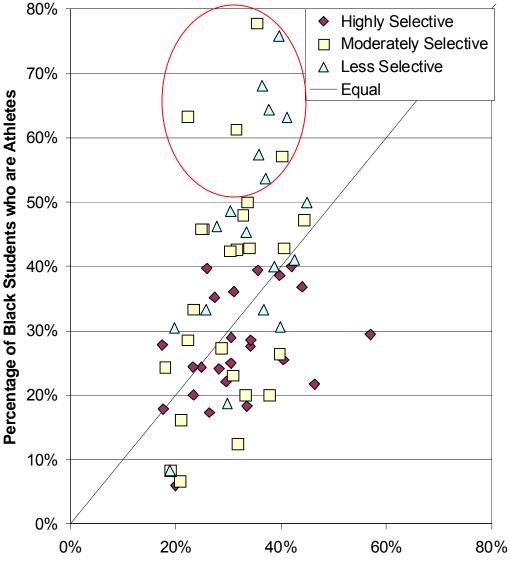

Athletic Participation – Black Students

- At <u>most institutions</u>, Black students participate in athletics at the <u>same rate</u> as White students
- At some <u>moderately and less</u> <u>selective</u> institutions, <u>Black</u> students are <u>much more</u> likely to be athletes than White students

Average N per Institution

| | Black | Total |
|-----------------|-------|-------|
| Athlete | 14 | 273 |
| All Students | 41 | 934 |

Percentage of White Students who are Athletes

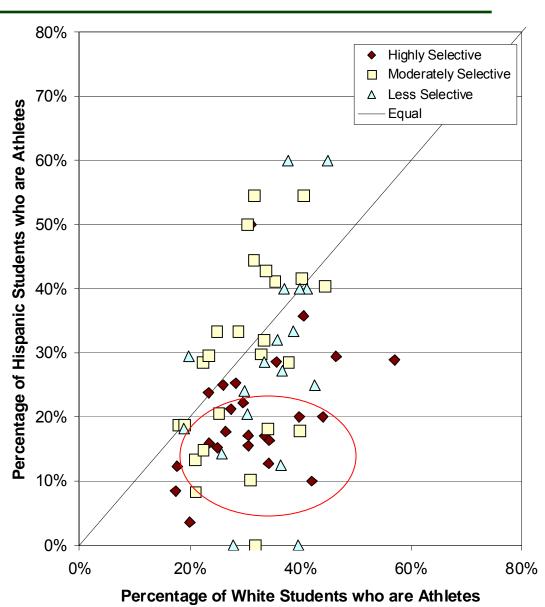

Athletic Participation – Hispanic Students

 <u>Hispanic</u> students are <u>less</u> likely to be <u>athletes</u> than white students at most institutions, especially at <u>highly selective</u> institutions

Average N per Institution

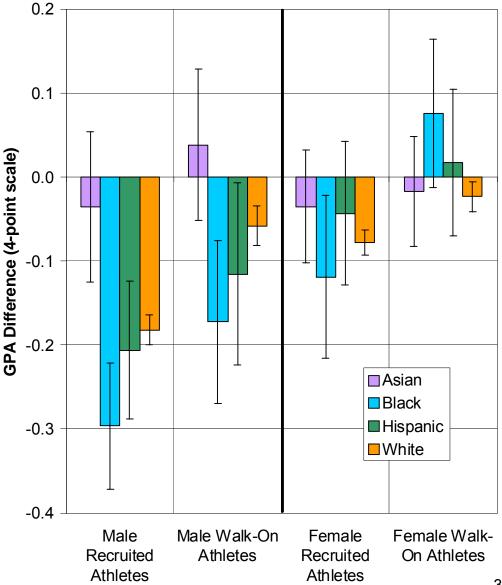

| | Hispanic | Total |
|-----------------|----------|-------|
| Athlete | 9 | 273 |
| All Students | 40 | 934 |

GPA Differences between Athletes and Non-Athletes

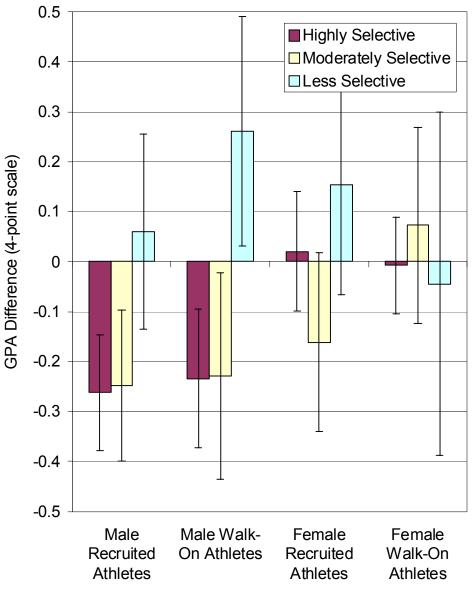

- Comparisons are between athletes and non-athletes in <u>same racial and gender</u> group
- <u>Male recruited</u> athletes have <u>meaningful, statistically</u> <u>significant</u> negative differences for Black, Hispanic and White students
- <u>Female</u> athletes have <u>small</u> (<0.1 point) GPA differences for all groups except Black recruited athletes
- <u>Black and Hispanic female</u> <u>walk-on</u> athletes may slightly outperform their non-athlete counterparts

GPA Differences by Selectivity: Black Athletes

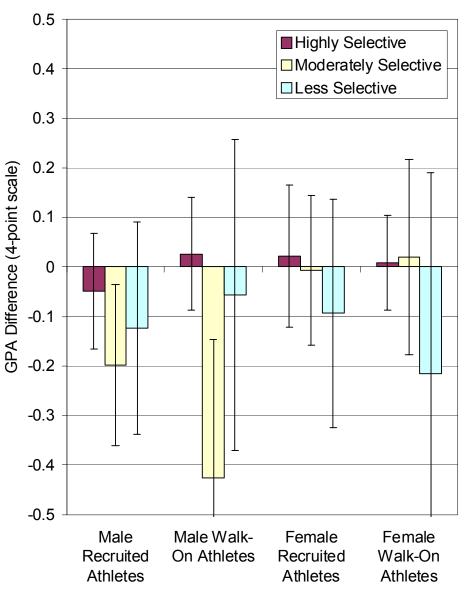

- <u>Highly and moderately</u> <u>selective</u> institutions have <u>large negative</u> GPA differences for <u>males</u>
- <u>Male walk-on</u> athletes have <u>positive</u> GPA difference at <u>less</u> <u>selective</u> institutions
- <u>No</u> statistically significant GPA differences for <u>female</u> athletes

GPA Differences by Selectivity: Hispanic Athletes

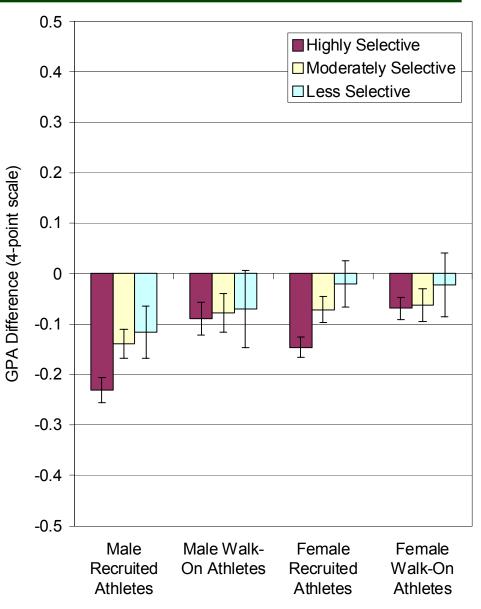

- <u>Female</u> athletes have GPAs <u>similar</u> to non-athletes
- <u>Male athletes</u>, especially walkon athletes have large <u>negative GPA differences</u> at moderately selective institutions
- <u>Moderately selective</u> institutions have statistically <u>significant</u> differences for <u>men</u>

GPA Differences by Selectivity: White Athletes

- <u>GPA differences</u> are <u>largest</u> at <u>highly selective</u> institutions and <u>smallest</u> at <u>less selective</u> institutions
- Negative GPA differences are statistically significant for all athletes in <u>highly and</u> <u>moderately selective</u> institutions

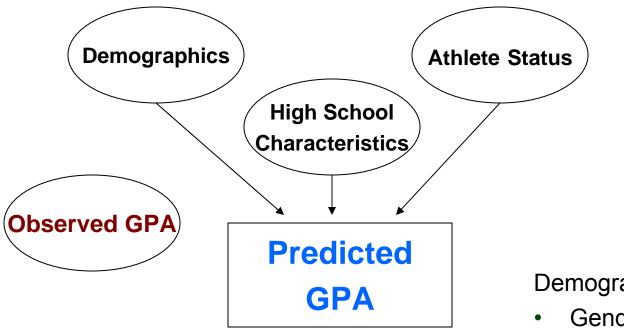

GPA Differences by Race and Selectivity

- Black athletes: for men, the largest negative differences in GPA are at highly and moderately selective institutions
- Hispanic athletes: largest negative differences for men at moderately selective institutions
- White athletes: largest negative differences at highly selective institutions
- GPA differences for female athletes only found for White women at highly and moderately selective institutions

Reminder about Underperformance

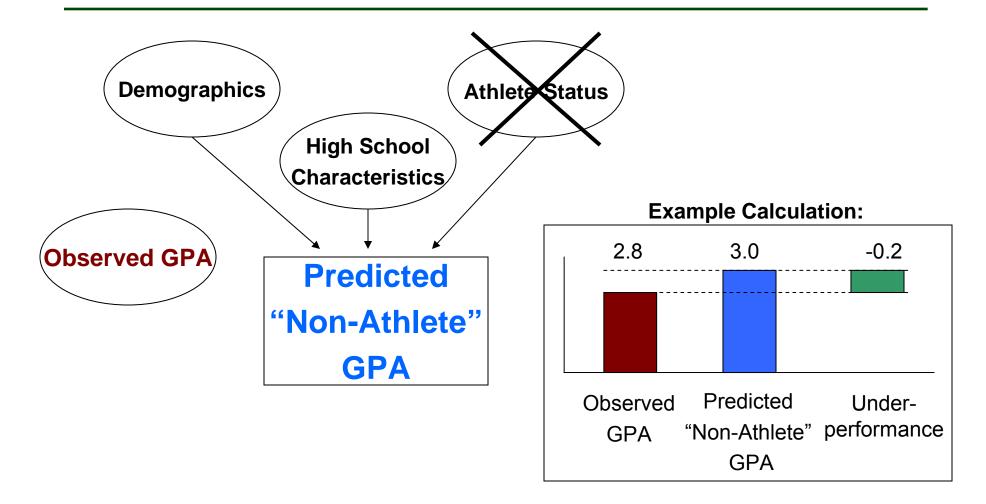

- **Demographics:**
- Gender
- race/ethnicity •
- U.S. citizen •

High School Characteristics:

- Student's SAT score •
- High School GPA Rank •
- Average SAT of High School •

Reminder about Underperformance

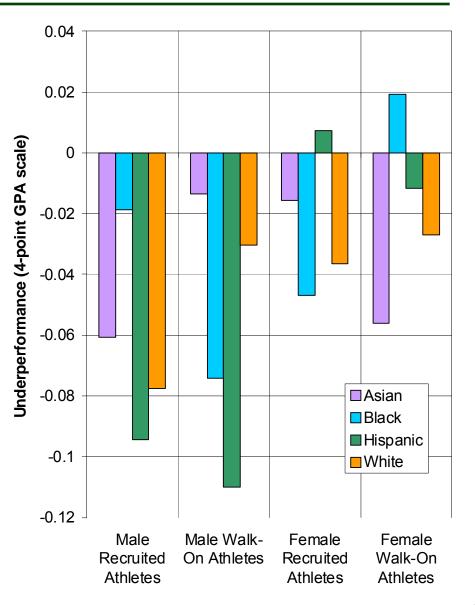

Observed GPA – "Non-Athlete GPA" = Underperformance

Underperformance by Race

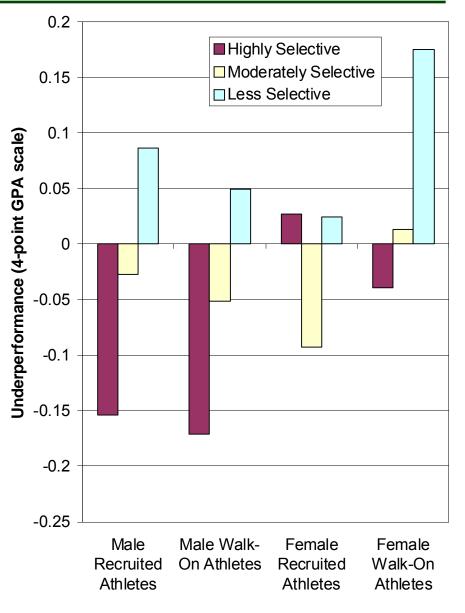

- Most underperformances are <u>small</u> (< 0.05 points)
- Among <u>male recruited athletes</u>, <u>Hispanic</u> and <u>White</u> students are more likely to underperform
- <u>Female</u> students typically have <u>smaller underperformance</u> than male students
- Black female walk-on players
 perform better than expected
- <u>Black male recruited</u> athletes have much <u>smaller</u> underperformance than other recruited athletes

Underperformance by Selectivity: Black Athletes

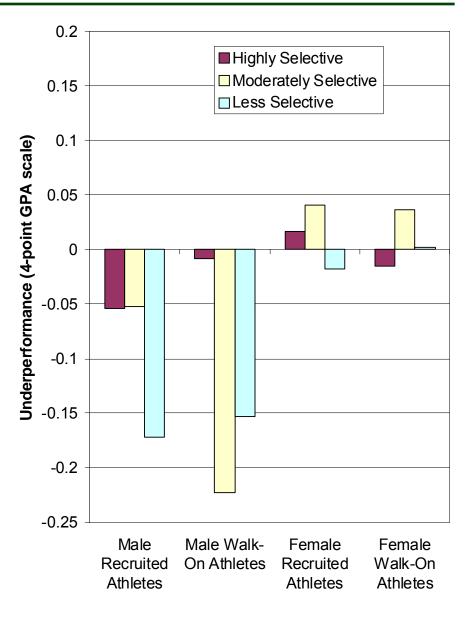

- <u>Underperformance</u> is <u>largest</u> for Black <u>men at highly</u> <u>selective</u> institutions
- All Black athlete groups
 <u>"overperform"</u> at <u>less selective</u>
 institutions

Underperformance by Selectivity: Hispanic Athletes

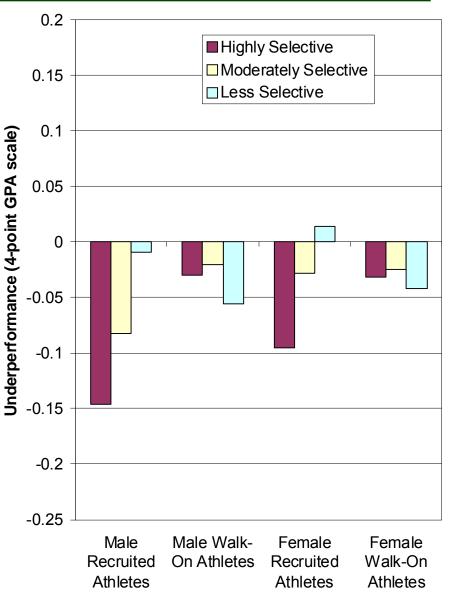

- Among Hispanic athletes, <u>underperformance</u> is largest for <u>male walk-on</u> athletes at <u>moderately and less selective</u> institutions and for <u>male</u> <u>recruited</u> athletes at <u>less</u> <u>selective</u> institutions
- Hispanic <u>female</u> athletes <u>overperform</u> slightly at <u>moderately selective</u> institutions
- Hispanic athletes at <u>highly</u> <u>selective</u> institutions have <u>small</u> if any underperformance

Underperformance by Selectivity: White Athletes

- Among White athletes, <u>underperformance</u> is largest for <u>recruited</u> athletes at <u>highly</u> <u>selective</u> institutions
- White <u>male recruited</u> athletes underperform at <u>highly and</u> <u>moderately selective</u> institutions
- White <u>female recruited</u> athletes at <u>highly selective</u> institutions underperform

Underperformance by Race and Selectivity

- Black athletes: underperformance is largest for male athletes at highly selective institutions
- Black athletes overperform at less selective institutions
- Hispanic athletes: underperformance is largest for male athletes at less selective institutions, and for male recruited athletes at moderately selective institutions
- White athletes: underperformance is largest for recruited athletes at highly selective institutions and for recruited male athletes at moderately selective institutions

Reminder about Athletic Retention

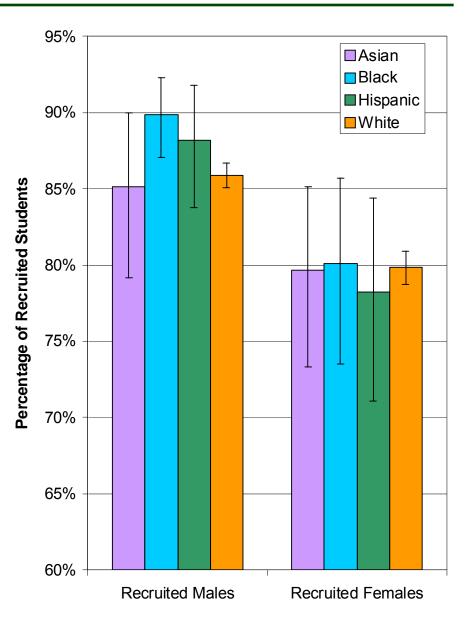

- Year 1 Retention: percentage of recruited students who played the sport for which they were recruited in Year 1
- Year 2 Retention: percentage of recruited Year 1 players who also played in Year 2 (sport for which they were recruited)

```
All Students
Recruited Athletes (18%)
Year 1 Retention (84%)
Year 2 Retention (78%)
```

Year 1 Retention in Recruited Sport

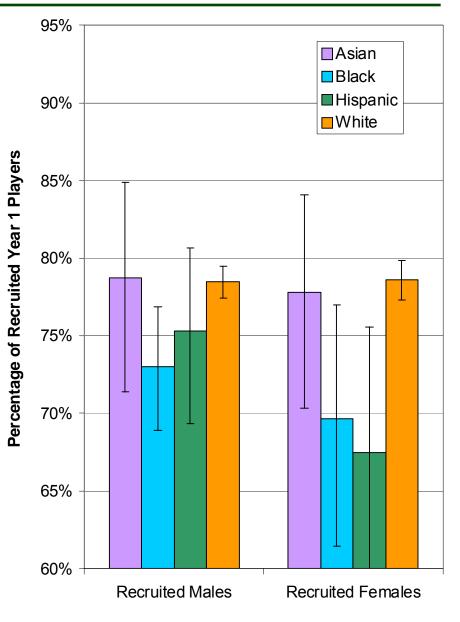

- <u>Male</u> students are generally <u>more likely to play</u> the sport for which they were recruited
- <u>Black men</u> are somewhat <u>more</u> <u>likely</u> to play than <u>White</u> men
- <u>Hispanic women</u> are somewhat <u>less</u> likely to play than <u>White</u> women
- Because of the small sample sizes, the racial differences are typically <u>not statistically</u> <u>significant</u>

Year 2 Retention in Recruited Sport

- <u>Black and Hispanic</u> athletes are somewhat <u>less</u> likely to be retained in their sport than <u>White or Asian</u> athletes
- <u>Asian and white men and</u> <u>women</u> are <u>equally</u> likely to be retained in their sport
- <u>Black and Hispanic women</u> are somewhat <u>less</u> likely to be retained in their sport
- Racial differences are generally <u>not statistically</u> <u>significant</u> because of small sample sizes
- Examination by institutional selectivity level is not possible because of small sample sizes

Research Findings

- Generally, there are only small racial differences in the athlete-nonathlete academic performance differences and in athletic retention
- Diversity of athletes is roughly similar to the overall diversity of the student body
 - At highly selective institutions, fraction of athletes who are minorities is somewhat smaller than fraction of students who are minorities
- Male recruited athletes of all races except Asians have lower GPAs than their non-athlete counterparts
 - The negative difference is largest for Black students
- Hispanic athletes tend to have less underperformance than other racial groups
 - The difference is especially noticeable for male recruited athletes
- Among men, a higher fraction of Black students are recruited than of students of other races
- Among women, White students are most likely to be recruited
- There are few significant racial differences in athletic retention

Main Conclusions

- Athletic participation and recruitment patterns vary by race and by institutional selectivity.
- Moderately and less selective institutions recruit a higher fraction of Black, Hispanic and White students as athletes than highly selective institutions.
- Hispanic athletes at highly selective institutions have GPAs comparable to their non-athlete counterparts, whereas Black and White athletes at these institutions have lower GPAs than their non-athlete counterparts.
- Highly selective institutions have the largest underperformance for Black and White male athletes, while less selective institutions have largest underperformance for Hispanic male athletes.

Measuring Academic Outcomes by Recruitment Levels of Sports

Supported by The Andrew W. Mellon Foundation

Philosophy Statement

| _ | | | | |
|-------------|---|---------------|--|--|
| Division I: | | Division III: | | |
| • | Emphasis on <u>regional and national</u> excellence of athletic programs | • | Emphasis on <u>regional conference</u> championships | |
| • | Athletic programs have a <u>dual</u> objective: <u>Serve college/university</u> community & <u>general public</u> | • | Place <u>importance on impact of</u> <u>athletics on participants & internal</u> <u>constituencies</u> rather than the general public/entertainment | |
| • | Athletic scholarships awarded | • | No athletically-related financial aid | |
| • | <u>Finances athletic programs</u> from revenues generated by the program itself, with income producing sports (football & basketball) | • | Sport participation <u>part of an</u> <u>educational experience</u> ; athlete to be treated as other <u>members of student</u> <u>body</u> | |
| • | <u>Competitive</u> level of sport programs with extensive varsity opportunities for students | • | Encourage participation in athletics and development of sport opportunities | |

 Support <u>ethnic/gender diversity</u>; equal emphasis given to men's and women's sports

(Bowen & Levin, 2003)

Sport Classification: DI vs. DIII

Division I:

High Profile Sports

- <u>Advanced recruiting</u> <u>mechanisms</u>
- <u>Revenue</u> generating
- Sports <u>scholarships available</u>
- <u>High publicity</u> in media influence

Findings:

- Athlete <u>recruited for High</u> <u>Profile Sports</u> earn substantially <u>lower GPAs</u>
- <u>Recruited Lower Profile</u> male & female athletes <u>do better</u>, but <u>not as well as</u> the student body
- <u>Recruited athletes</u> exhibit a <u>greater negative academic</u> <u>performance</u> than walk-ons

body

<u>Derfor</u> College Sports Project

Division III:

Highly Recruited Sports

- <u>Advanced recruiting</u> <u>mechanisms</u>
- High percentage of athletes are recruited for these sports (>65%)
- More visible to athletic staff and <u>college faculty</u>

Findings: Today's Presentation (College Sports Project, 2010)

(Bowen & Levin, 2003)

Sport Categories

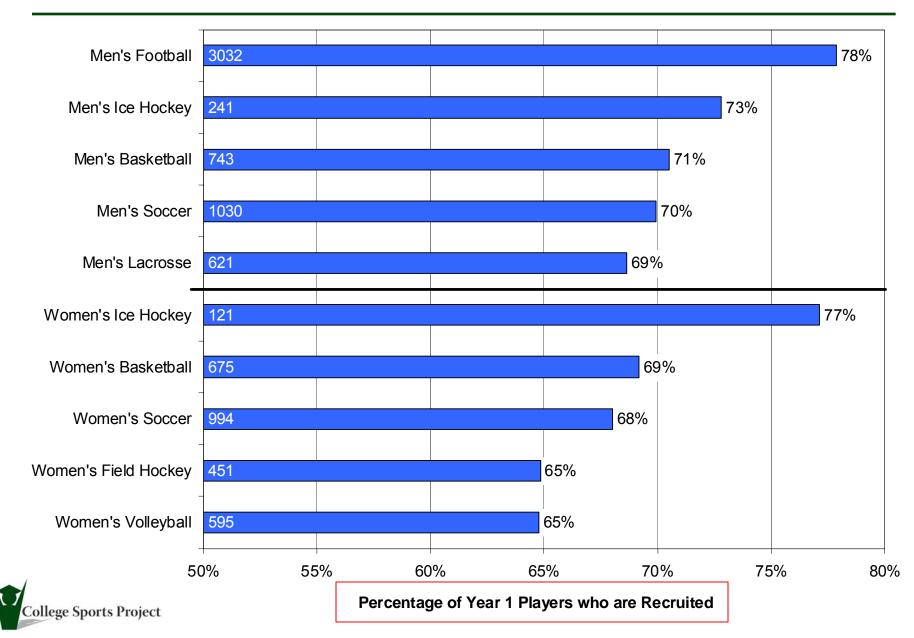

Methodology

- 2005-06 & 2006-07 Entering Cohort, Year 2 data
- Each Highly Recruited Sport (HRS) category comprised a <u>minimum of 50</u> recruited athletes* for that sport per cohort
- \geq 65% of <u>athletes who played</u> the sport in Year 1 were <u>recruited</u> for that sport

| | Men's Sports | Women's Sports |
|----------------------------------|---------------|----------------|
| | Basketball | Basketball |
| Highly Recruited Sports (HRS) | Soccer | Soccer |
| | Ice Hockey | Ice Hockey |
| | Football | Field Hockey |
| | Lacrosse | Volleyball |
| Examples of Other Sports | Swimming | Swimming |
| | Track | Track |
| | Cross Country | Cross Country |
| | Golf | Crew |
| | Baseball | Softball |

Highly Recruited Sports

CSP: Sample Sizes

- 9% of the students in the dataset are <u>walk-on</u> <u>athletes</u>
- 18% of the students in the dataset <u>recruited</u> <u>athletes</u>
- 56% of the recruited athletes are <u>recruited</u> <u>for a HRS</u>

| All Students | Male | Female | Total |
|---------------------|----------|----------|----------|
| | (35,827) | (47,901) | (83,728) |
| Walk-on Athletes* | 11% | 8% | 9% |
| | (4,142) | (4,218) | (8,360) |
| Recruited Athletes* | 24% | 13% | 18% |
| | (8,951) | (6,259) | (15,210) |
| Recruited HRS** | 63% | 45% | 56% |
| | (5,661) | (2,842) | (8,503) |
| Recruited Other** | 37% | 54% | 44% |
| | (3,290) | (3,397) | (6,687) |

*Percentage of walk-on and recruited athletes are measured using all students, by gender, as the denominator

**Percentage of recruited athletes in the HRS and Other sports subsets are measured using recruited athletes, by gender, as the denominator

Number of Recruited Students by Recruitment Level & Institutional Selectivity

- A <u>slightly larger</u> <u>percentage</u> of male and female athletes are recruited for <u>HRS at less</u> <u>selective institutions</u> than at moderately and highly selective institutions
- <u>Recruitment levels in HRS</u> <u>increases for men</u> from Highly to Less selective institutions, where the differences of recruitment of HRS and Other sports even out for women

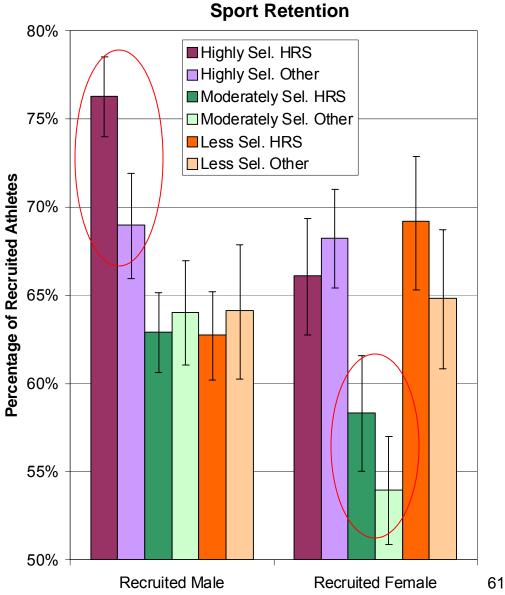

| | Highly Recruited Sports (HRS) | | Other Sports | |
|---------------------------|----------------------------------|-----------------------|--------------|----------------|
| Highly | Male | 59% (1,401) | Male | 41% (954) |
| Selective Institutions | Female | 43% (817) | Female | 57% (1,102) |
| Moderately | Male | 63% (1,782) | Male | 37% (1,040) |
| Selective Institutions | Female | 46% (888) | Female | 54% (1,038) |
| Less | Male | 70% (1,497) | Male | 30% (630) |
| Selective Institutions | Female | 51% (597) | Female | 49% (583) |

Athletic Retention among Recruited Athletes

HRS vs. Other Sports by Selectivity

- Retention = Percent of recruited students who played the sport for which they were recruited in Years 1 & 2
- Generally, there is <u>no</u> significant <u>difference</u> in retention by <u>type of</u> <u>sport</u>
 - <u>Exception</u>: <u>male</u> athletes at <u>highly selective</u> institutions
- <u>Male</u> recruited athletes are <u>more</u> likely to be <u>retained</u> in their sport at <u>highly selective</u> institutions
- <u>Female</u> recruited athletes are <u>less</u> likely to be retained in their sport at <u>moderately selective</u> institutions

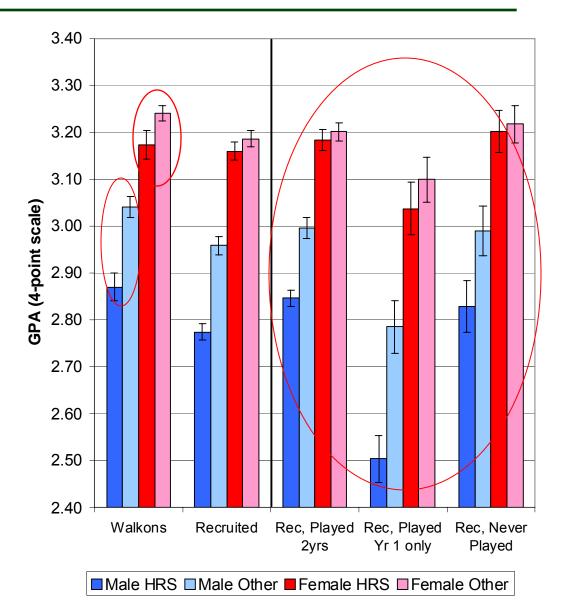

Conclusions about Athletic Participation

- Most recruited athletes (85%), both men and women, play the sport they were recruited for during their freshman year at an institution
- About 12% of all students who are recruited to participate in a HRS <u>do not play any sports</u>
- Close to 19% of athletes who are <u>recruited</u> (for a highly recruited sport or other sport) who played in Year 1 <u>do</u> <u>not return to play</u> in Year 2

GPA by Sport Type & Gender

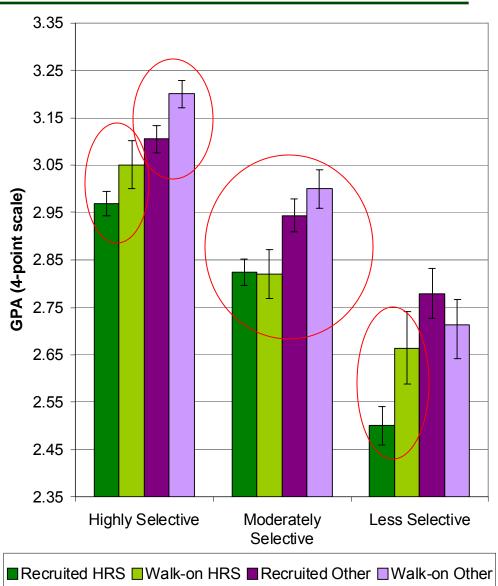

- <u>Men in Other sports</u> have <u>higher GPAs</u> than men in HRS
- <u>Women in HRS and other</u> <u>sports</u> do <u>not</u> have a <u>significant difference</u> in GPA
- <u>Recruited students who</u> <u>never played</u> and those who <u>played for 2 years</u> have <u>higher GPAs</u> than students who <u>played only</u> <u>in their first year</u>

GPA by Sport Type for <u>Males</u> by Institutional Selectivity

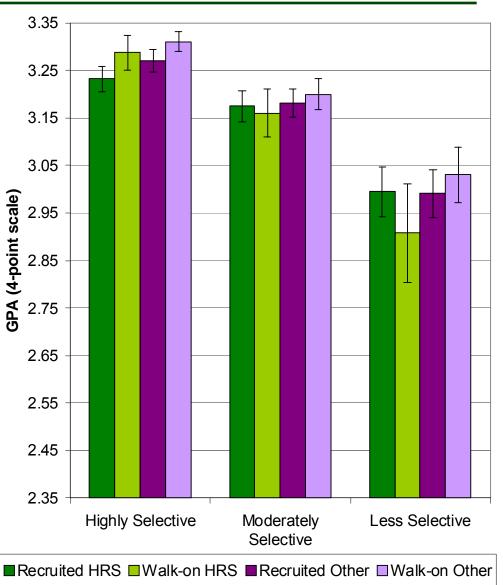

- At <u>highly selective and less</u> <u>selective institutions</u>, <u>recruited</u> students <u>in HRS</u> have <u>significantly lower GPAs</u> than their walk-on counterparts
- At <u>highly selective institutions</u> <u>walk-ons in Other sports</u> have <u>higher GPAs</u> than those recruited for Other sports
- At <u>moderately selective</u> <u>institutions</u>, students in <u>HRS</u> <u>have lower GPAs</u> than those in Other sports (regardless of whether they were recruited)

GPA by Sport Type for <u>Females</u> by Institutional Selectivity

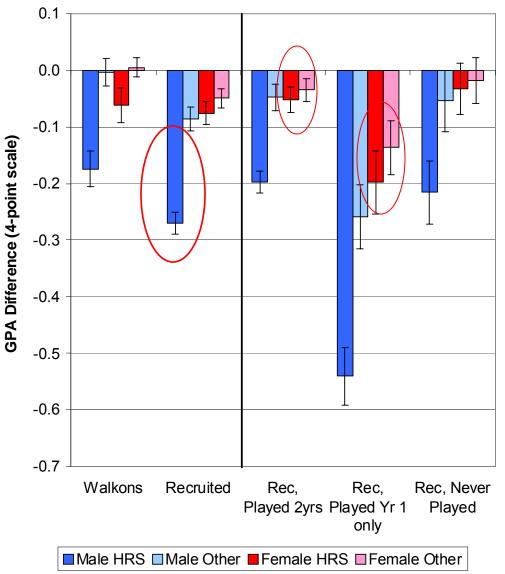

- Female recruits and walk-ons have smaller difference in their GPAs across selectivity levels than their male counterparts
- Females in HRS perform as well academically as their counterparts in Other sports

GPA Difference between Athletes and Non-Athletes by Sport Type & Gender

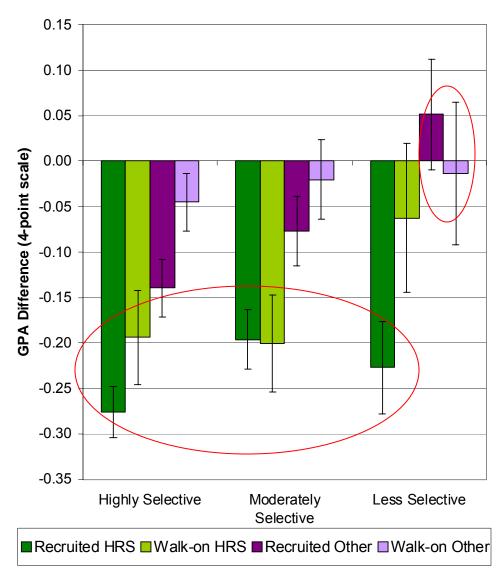

- Generally, <u>recruited athletes</u> <u>do not perform as well</u> as their non-athlete counterparts
- <u>Male recruited</u> athletes in HRS have <u>significantly</u> <u>lower GPAs</u> than male nonathletes
- <u>Female recruited</u> athletes who <u>played a sport</u> they were recruited for <u>have</u> <u>lower GPAs</u> than nonathletes
 - Differences for women are typically small

GPA Difference between Athletes and Non-Athletes Male Athletes, by Institutional Selectivity

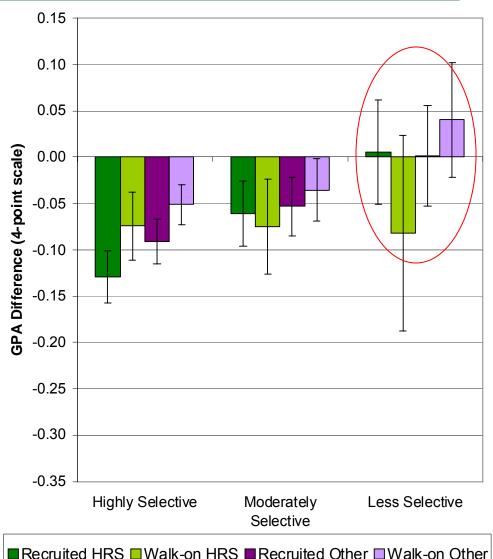

- <u>Men in HRS have lower</u>
 <u>GPAs</u> than male non-athletes
 - Exception: walk-ons at less selective institutions
- <u>At less selective institutions,</u> <u>men in Other sport</u> types have GPAs similar to male non-athletes

GPA Difference between Athletes and Non-Athletes Female Athletes, by Institutional Selectivity

- <u>At less selective institutions,</u> female <u>athletes in HRS &</u> <u>Other sports do as well</u> as non-athletes, academically
- <u>At highly and moderately</u> selective institutions, <u>females</u> in both sport types <u>do not perform as well</u> as non-athletes
- <u>Athlete and non-athlete</u> differences for women are generally <u>small</u>

Conclusions about Academic Performance

- There is a <u>larger difference in academic performance</u> by sport type for <u>men</u> than for women
- Students who are <u>recruited</u> for a Highly Recruited Sport (<u>HRS</u>) tend to have <u>lower GPA's</u> than students who are <u>recruited for</u> <u>Other sports</u> (a finding that mirrors previous DI research)
- Students who are <u>recruited</u> for a <u>HRS</u> and <u>play that sport for 2</u> <u>years</u> have a significantly <u>higher average GPA</u> than students who are recruited for a HRS and play that sport for 1 year
 Similar but loss drastic differences are seen in Other sports
 - o Similar but less drastic differences are seen in Other sports

Glossary

- <u>Highly Selective Institutions</u>: Average SAT of incoming students > 1250, Baccalaureate institution
- <u>Moderately Selective Institutions</u>: Average SAT of incoming students 1150-1250, Baccalaureate institution
- <u>Less Selective Institutions</u>: Average SAT of incoming students < 1150, Baccalaureate institution
- <u>Athlete</u>: A student who at some point in his/her college career participated in a sport
- <u>Walk-on athlete</u>: Student who is not a recruited athlete but participates in sports
- <u>Highly Recruited Sport (HRS)</u>:
 - Each Highly Recruited Sport (HRS) category comprised a minimum of 50 athletes recruited for that sport per cohort
 - \geq 65% of athletes who played the sport in Year 1 were recruited for that sport
- <u>Other Sport</u>: Sports that are not classified as Highly Recruited Sports
- <u>Recruited athlete</u>: Student was recruited to participate in a HRS or Other sport prior to his/her matriculation at an institution
 - <u>Recruited</u>, <u>Played</u> Year 1 <u>Only</u>: Student was recruited and played in the sport for which s/he was recruited during Year 1
 - <u>Recruited</u>, <u>Played Years 1 & 2</u>: Student was recruited and participated in the sport for which s/he recruited in Years 1 and 2 (during the freshman and sophomore years)
 - <u>Recruited</u>, <u>No Play</u>: Student was recruited, but did not participate in the sport for which they were recruited
