

WordPerfect Takes a Powerful Next Step

WordPerfect's professional word processor may bring the Next system into the mainstream.

BY JOHN LOMBARDI REVIEW BOARD

As the Next Computer enters mainstream desktop computing, it requires a professional word processing system. Unix tools won't do, and the included writing program, WriteNow,

doesn't measure up to the standards of professional word processors. WordPerfect Corp. has the only product that fits the bill, and WordPerfect for Next is a strong word processor with most of the functionality of the DOS version and a few Next extras.

This review departs somewhat from our normal procedures. InfoWorld reviews normally depend on a rigorous comparison of products sharing similar hardware and operating system platforms. However, WordPerfect has no competitors in the Next domain of professional word processing with which to compare. So we've taken as our reference point the current state of the art in PC word processing products: Microsoft Word for Windows, Lotus Ami Pro, or WordStar/NBI Legacy. (For reviews of these products, see product comparison, January 7, Page 51.)

FEATURES:

WordPerfect for Next translates WordPerfect 5.0 to the Next environment. This translation captures most of the important features of the DOS product and makes them easier to use and understand through the Next's graphical operating system. Although not as sophisticated and powerful as Word for Windows or Ami Pro, for example, and missing the extra features included in WordPerfect 5.1 — such as an equation generator, automatic bullets, and tables — WordPerfect for Next offers competitive professional performance.

PERFORMANCE:

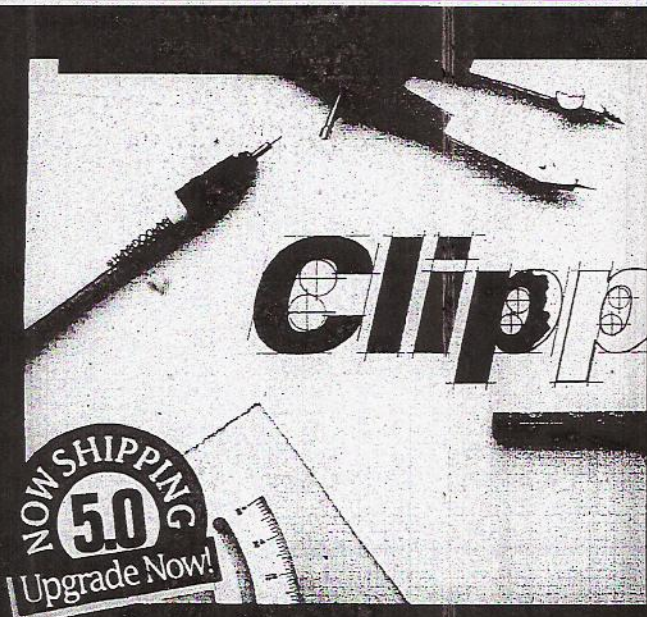

Basic editing: WordPerfect for Next has all of the basic editing tools that are expected in a first-rate word processing program, with the exception of a rectangular-area cut and paste. WordPerfect Next performs complex search and replace, handles multiple tab types, and will include tab leaders. Auto-hyphenation permits manual verification and adjustment of hyphenation points. WordPerfect Next supports combined documents. In addition, the program will justify text left, right, center, or full. We rate basic editing very good.

Proofing tools: In addition to dictionaries, WordPerfect Next's proofing tools include a spelling checker that maintains capitalization, a global replace feature, and a thesaurus. There is no grammar checker, but the Next environment in-

cludes a very sophisticated thesaurus, a dictionary, with definitions, and a quotation library. This is available to the WordPerfect user through a window and clipboard. These text facilities, while not part of WordPerfect, enhance the tools available to WordPerfect users, so we give the product partial credit for these features. WordPerfect has a minor defect in its spelling checker that does not permit a correction containing a space. If the misspelled word is "word processing," and the correction should be "word processing," the user can't enter the correction without exiting the spelling checker. WordPerfect has acknowledged this problem, and will change it in a future update. We rate proofing tools good.

Mail merge: WordPerfect for Next's mail merge is capable; it handles basic tasks such as using data files imported from WordPerfect DOS, Library, or Next files to produce form letters, mailing lists, and similar documents. In general, this facility mimics the mail merge in WordPerfect 5.0. Sorts can include sophisticated selection criteria that make it easy to create sublists for a standard merge function. Unfortunately, while the sort can handle multiple level sorts, it requires that all levels be either ascending or descending, which is a disadvantage. WordPerfect for Next earns a good rating for its mail merge.

Layout: WordPerfect Next has sophisticated layout features. Layout capabilities include multiple columns, binding margins, WYSIWYG editing in columns, as well as complete ruler and font control. In addition, the program can scale, crop, and rotate graphics imported in the WPG format. There is a line drawing feature, but you can't put a repeating line between columns automatically. There is no table editor or formula editor. The program supports the effective but very complicated WordPerfect DOS math capability. WordPerfect for Next also offers widow and orphan control, vertical justification, and styles. There are also multiple views (25 to 200 percent of actual) to permit WYSIWYG editing in any type style and size. In general, the display of formatting

Your Left Brain Needs Clipper.

Organization is everything in business. The left side of your brain knows this. It wants order. Economy. Precision. All reasons your left brain appreciates Clipper 5.0, the premier application development system for PCs.

An open architecture programming system, Clipper provides a flexible environment for developing precisely the application you need, not a messy approximation. Its user-definable commands and functions let you configure the Clipper language for your exact requirements. Its compiler generates .EXE files for rapid execution and cost-free distribution. Its new linker even lets you build and run applications larger than available memory! And its elegant network support yields high performance on even the largest systems.

So, if you're charged with coaxing order out of chaos for your business, put Clipper in your programming arsenal today. It has exactly the programming power you need!

WordPerfect for next enables you to import color images, and use line drawings and multiple typefaces in one document.

and proportionally spaced type on-screen is excellent except for fonts displayed small on-screen. These tend to have irregular letterspacing that disappears when the magnification level is increased. You can open a window that shows all formatting tokens, which is equivalent to the RevealCodes window in WordPerfect for DOS. We rate layout excellent.

Style sheets: WordPerfect for Next has basic predefined styles for headers, footers, footnotes, and tables of contents. You can transfer style information from one document to another, and styles can exist independent of documents. We rate style

sheets very good.

Font/printer support: WordPerfect for Next uses the Next's required system printer, a 400-dpi PostScript device. WordPerfect uses both its own fonts and Next fonts. It also supports kerning. WordPerfect's font selection procedure is very easy; it uses a dialog box with examples. We compared output to Word for Windows, and we found the WordPerfect for Next results to be crisper. However, the Word for Windows printer was a 300-dpi PostScript printer, so the higher resolution with WordPerfect for Next may account for the clearer output. We rate font/printer support excellent.

Reference tools: Reference tools include auto-numbering and multiple-level outlining. The program supports footnotes and endnotes in the same document, as well as cross references, tables of authorities, indexes, tables of contents, and other lists. WordPerfect for Next also has comments, redlining, and strikeout. We rate reference tools very good.

Import/export: Import and export to platforms other than Next is limited. WordPerfect for Next reads and writes files from WordPerfect, Versions 4.2 through 5.1 for DOS. It converts them

WordPerfect DOS 5.1 and most of the Windows products in the Word for Windows class. We rate macros satisfactory.

DOCUMENTATION:

As is the practice with Next, all WordPerfect documentation exists on-line. Although it is reasonably comprehensive and readily available, we didn't find it as complete or as easy to use as the traditional loose-leaf WordPerfect reference manual. On-line documentation works best when you understand the product but need information on the details of a

feature. It works less well when used by novices who are unfamiliar with the general product category. The on-line help is not context sensitive. We rate documentation satisfactory.

EASE OF LEARNING:

WordPerfect for Next is relatively easy to learn, especially if you have already mastered the conventions of the Next Step operating environment. Most functions are easy to follow; the on-line documentation contains most of what's needed, and the dialog boxes are self-explanatory. The

PRODUCT SUMMARY

Company: WordPerfect Corp., 1555 N. Technology Way, Orem, UT 84057;

(801) 222-5000.

List price: \$495.

Requires: Next computer and supported PostScript printer; Version 2.0 or later of Next Step operating system.

Pros: Excellent layout capabilities; fine graphics; strong editing; easy to learn and use; excellent sort; multiple indexes and lists; tables of authorities; and both endnotes and footnotes.

Cons: Macros lack programming; mail merge lacks conditionals; spelling checker won't handle embedded blanks; no equation editor; documentation only available on-line.

Summary: A strong professional word processing program for the Next computer, WordPerfect translates DOS 5.0-level functionality to the Next Step GUI. For Next users this is a strong product that works well with other Next utilities, especially the dictionary, thesaurus, and quotation library.

"WordPerfect for Next is relatively easy to learn, especially if you've mastered Next Step."

exactly into WordPerfect for Next — except for functions from Version 5.1 that are not included in the Next version, such as tables and equations. However, these attributes are preserved and can be resumed under Versions 4.2 through 5.1.

WordPerfect for Next will handle ASCII and the Microsoft Rich Text Format (RTF). WordPerfect for Next can also export ASCII to DOS platforms. It will read WordPerfect graphic files written in the DOS WPG format.

While we normally do not give high ratings for this level of compatibility, it compares favorably to the cross-platform compatibility found in most Windows products. Compatibility with Next-based word processing products is superb, mostly because there are few relevant Next products. We rate import/export satisfactory.

Networking: The Next machine can share files, hard disks, and directories over a network — for WordPerfect of any other application. (We did not run network-specific tests for this review.) We rate networking excellent.

Speed: Next is an inherently more powerful computer than our standard Windows platform. In general, we found WordPerfect for Next acceptably quick. However, it sometimes needed to go to disk to find some information — help screens, for example — which delayed response time. Graphics response was quick, reformatting fast, and saving reasonable. We rate speed good.

Macros: WordPerfect for Next has keystroke macros that include the commands from the WordPerfect command set. Macros can be assigned to various key combinations, and the program includes a macro editor. This version lacks programming constructs such as If, Then, Else or Do Until, which are available in

Your Right Brain Wants It!

While your left brain duly notes the intricacies of Clipper programming, the right brain is what you get them! Imagine a programming language with no limits! The language can be used to work with your own routines and you can even transfer code from other languages, like C and Pascal. You're always free to continue to develop your own programming style.

Hey, let's say you want to read and write in some format other than the old-fashioned ASCII already supports. It's no problem, since Clipper sports a replaceable database driver to support multiple drivers to be used concurrently with the application! There's no end to the possibilities you can pursue with Clipper!

Clipper's open architecture system lets you use your imagination with unparalleled freedom. It's a paint for a developer's mind, and it's a canvas for your imagination to inspire your application. Meet yourself with Clipper 5.0. It has everything you need and anything you'd want.

Clipper 5.0

 Nantucket

Nantucket Corporation, 12533 West Jefferson Boulevard, Los Angeles, CA 90046 213/790-7253 FAX 213/790-7254 1991/07/01 Nantucket, the Nantucket logo and Clipper are registered trademarks of Nantucket Corporation. Other brand and product names are used for identification purposes only and are the property of their respective holders. Prices current. Copyright © 1991 Nantucket Corporation.

book of sample lessons serves as a tutorial to many WordPerfect functions, but the on-line documentation lacks adequate examples. We rate ease of learning good.

EASE OF USE:

Once you are familiar with the operating system and WordPerfect itself, the program becomes quite easy to use. Its macro facility permits keystroke customization. The math facility remains difficult to use, however, and the absence of programmable macros detracts some. We rate ease of use very good.

ERROR HANDLING:

Error handling appears to be reasonably strong. There is an undo that accumulates deletions as long as the insertion point isn't moved, which is essentially a one-level undo. Although the system prompts you before exiting an unsaved file, the profusion of windows and boxes can lead the inexperienced user to lose a file. There is also a timed backup feature. We rate error handling satisfactory.

SUPPORT:

Support policies: WordPerfect offers un-

limited free, but not toll-free, technical support. Support hours are 7 a.m. to 6 p.m. Mountain time, Monday through Friday. Fax support is also available. We rate support policies good.

Technical support: The technical support staff responded promptly and expertly when we called. WordPerfect for Next has its own support line. We rate WordPerfect's technical support very good.

VALUE:

Relative to other Next word processing

products — of which there are few, and none directly competitive — WordPerfect is a strong value at \$495. It's not quite as good as the best of the Windows products, nor as powerful as the most recent edition of WordPerfect for DOS, but within the Next context it is a fine product. WordPerfect for Next is a very good value.

MEETING MAKER™ SAVES SOLES

THE BEST WAY TO GET THE RIGHT PEOPLE IN THE RIGHT PLACE AT THE RIGHT TIME

You spend enough time in meetings. You shouldn't have to waste so much time setting them up. You need Meeting Maker, from ON Technology. Meeting Maker eliminates all of those e-mail messages, memos and phone calls that have been consuming your valuable time. If you're tired of chasing people down, Meeting Maker lets you specify the Who, Where, Why, When and What of meetings in one easy step. Our exclusive *Auto-Pick* option will automatically select the earliest time that everyone can make your meeting. The *Proxy* feature allows your assistant to act in your behalf. And Meeting Maker prints in most popular day planner formats. The time before a meeting should be spent preparing, not negotiating. So put an end to meeting hell. Get Meeting Maker. Precision scheduling for groups.
